Microbial Life History

The Fundamental Forces of Biological Design

vol. 1: theoretical background

vol. 2: the design of metabolism

STEVEN A. FRANK

JUNE 28, 2021

metabolism@Draft-0.4-12::8cf98cc (2021-06-28 21:47Z)

Preface	vii
1 Microbial Design	1
How to Read; Theoretical Background; The Design of Metabolism	
THEORETICAL BACKGROUND	
2 Forces of Design	11
What is Fitness?; Fitness and the Difficulty of Measurement	
3 Comparison and Causality	17
Comparative Predictions; Evolutionary Response versus Organismal Response; Fundamental Forces and Partial Causes; Causal Inference; Structure and Notation of Comparative Predictions; Recap and Goal	
4 Brief Examples	29
Metabolism and Growth Rate; Support by Empirical Test; Patch Lifespan and Microbial Cancer; Heterogeneity in Public Goods; Stage-Dependent Growth; Summary	
5 Theory: Forces	43
Tragedy of the Commons; Similarity Selection and Kin Selection; Tradeoffs and Marginal Values; Repression of Competition; Heterogeneity in Vigor and Public Goods; Demography and Reproductive Value; Stage-Dependent Traits in Life Cycle; The Three Measures of Value; Scaling of Time and Space; Variable Environments	
6 Theory: Traits	83
Nature of Traits; Modification of Traits; Origin of Traits	
7 Theory: Control	95
Error-Correcting Feedback and Robustness; Principles of Control; Error Correction and Signal Amplification; Robustness to Process Uncertainty; Responsiveness	

versus Homeostasis; Sensors; Control Tradeoffs in Design	
8 Studying Biological Design	115
THE DESIGN OF METABOLISM	
9 Microbial Metabolism	121
10 Growth Rate	123
Comparative Hypotheses in the Study of Design; Testing Comparative Hypotheses; Comparative Predictions about Growth Rate; Comparative Predictions about Tradeoffs	
11 Thermodynamics: Biochemical Flux	141
Entropy Production; Force and Resistance Determine Flux; Mechanisms of Metabolic Flux Control	
12 Flux Modulation: Driving Force	155
Near-Equilibrium Glycolysis; Overflow Metabolism: Mechanisms; Overflow Metabolism: Design Puzzles; Evolutionary Timescale; Alternative Glycolytic Pathways	
13 Flux Modulation: Resistance	187
Resistance Impedes Flux; Mechanisms to Alter Resistance and Flux; Genetic Drift; Challenges in Control Design; Problems of Flux Modulation; Limitations and Prospects	
14 Variant Pathways	203
Glycolytic Yield; Final Electron Acceptors; Weak Redox Gradients; Electron Flow between Cells; Alternative Carbon Sources; Hierarchical Usage of Complex Carbohydrates; Puzzles of Design	
15 Tradeoffs	225
Biophysical Constraints and Cellular Allocation; Exploration versus Exploitation versus Regulation; Thermodynamics and Biochemical Flux; Fitness Components and Life History; Warfare versus Productive Traits; Cooperative Traits; Timescale Tradeoffs; Bet-Hedging Tradeoffs; Control Tradeoffs; Summary	
16 Predictions: Overflow Metabolism	251
Comparative Predictions and Partial Causes; Back-	

ground; Proteome Limitation; Membrane Space Limitation; Response to Environmental Challenge; Summary	
17 Predictions: Diauxie, Electrons, Storage	293
Switching between Food Sources; Distributed Electron Flux; Storage when Resources Fluctuate	
18 Design Revisited	337
References	339
